Name = Amir

Headline = MSc People Analytics & Human-Centric Management at UCL | Turning workforce data into better decisions about people

Short bio = I'm a postgraduate student at UCL, studying People Analytics and Human-Centric Management. I came to it from Sport and Exercise Sciences at the University of Exeter, where I graduated with a First and a Dean's Commendation. My dissertation research on perception and force control taught me to design studies and work carefully with data. Now I'm applying that to the workplace, using statistics and Python (pandas, Plotly) to understand what helps people and teams perform well. I'm especially interested in how organisations can use evidence, not guesswork, to support their people. I'm looking for graduate opportunities in people analytics and HR in the UK.
